

Ausa D1001APG

£POA

Cost-effective, safe and high-tech. It is equipped with a 180-degree swing skip and it has a 10-tonne (22,000 lb) payload, making it AUSA's articulated dumper with the highest payload. Its transmission with a converter ensures the fast delivery of power and speed.

The D1001APG dumper is very easy to maintain because the arrangement of all of the components has been designed to keep the unit's downtime to a minimum. It can optionally be equipped with Smart Stop, which turns off the engine when it is not in use. This will significantly reduce fuel consumption, maintaining low CO2 emissions.
